

CeBIT: Flexible IT services for small and medium-sized businesses

T-Systems customers benefit from dynamic hosting for Microsoft Navision®

Frankfurt, Germany, February 22, 2006. – Small and medium-sized businesses increasingly rely on flexible outsourcing. At the world's largest computer trade fair, T-Systems will demonstrate how companies are able to reduce costs with a dynamic solution for Microsoft Navision®.

At CeBIT, T-Systems will present a new operational concept that is designed specifically for small and medium-sized businesses. With Dynamic Services for Microsoft Navision®, companies are able to cost-efficiently outsource the basic operation of application software to the ICT service provider's data center. The data center has been security-certified. Customers do not have to set up their own infrastructure for the standard enterprise resource planning (ERP) system. This enables them to save costs and access the IT resources they need flexibly and on demand.

Customers can book on short notice the additional IT services they need for peak loads and then reduce them afterwards. This is perfect for fluctuating demands such as at the end of the year or during the holiday season. In the past, companies had to reserve expensive excess capacity for peak loads. T-Systems only invoices those services that have been ordered according to time unit and quantity booked.

Since the Deutsche Telekom subsidiary holds data center resources for many customers in one large server pool, customers can flexibly call up these resources according to their individual demands. For customers, this dynamic resource availability means lower capital commitment and reduced IT costs.

In addition to the dynamic operating solution, T-Systems delivers the entire ERP value added chain for the implementation of the standard software Navision®, as well as custom solutions. The ICT service provider does this together with qualified partners as a general contractor. T-Systems provides comprehensive services to its customers in the ERP environment with consulting services, software installation, industry-specific software adaptation and development as well as hosting the Navision® application software.

Visit T-Systems from March 9-15 at the CeBIT booth of Deutsche Telekom in Hall 26

About T-Systems

T-Systems is one of Europe's leading providers of information and communications technology (ICT). Within the Deutsche Telekom Group, T-Systems is responsible for supporting the business customer segment, ranging from medium-sized and large companies all the way up to multinational corporations and public institutions. The company has 51,000 employees in over 20 countries worldwide and posted revenues of nearly €13 billion in 2004.

The company optimizes processes and cuts costs for its customers, thus providing them additional flexibility for their core business. It does this by making targeted use of industry expertise and cutting-edge technology. T-Systems' services encompass all levels of the information and communications technology value chain, spanning from ICT infrastructure and ICT solutions, up to, and including, business process management.
