

TEAMWORK MADE SIMPLE

DYNAMIC SERVICES FOR COLLABORATION

CLOUD-BASED BUSINESS AGILITY

Teamwork is becoming an increasingly critical success factor for today's enterprises. Disparate, locally-operated infrastructures make communication unnecessarily expensive and complicated. And they generate significant administrative effort. What's more, they lack the elasticity needed to cope with peak load and organizational change.

Dynamic Services for Collaboration (DSC) from T-Systems is the answer – enabling seamless intra- and inter-enterprise cooperation and communication on the basis of a single, standardized environment. DSC provisions Microsoft Exchange, Lync and SharePoint services from a highly secure T-Systems private cloud – in line with your changing needs. Multi-channel communications are based on seamlessly integrated modules – giving you instant messaging, email, calendars, presence status information, ad-hoc video conferencing, and more. You benefit from a platform for secure web-based collaboration, in conjunction with structured data storage and granular rights management. Access is possible via your corporate network, or optionally available via the Internet or mobile devices.

The example pricing for the two solutions, each designed for a specific organizational size, clearly demonstrates the attractively low cost of dynamic, centrally provisioned collaboration services.

KEY FACTS AT A GLANCE

Savings: Low costs as a result of highly standardized, highly automated processes. User-based pricing for cost transparency and ease of budgeting.

Flexibility: Highly responsive to new requirements, e. g. fluctuations in load, business growth, restructuring.

Security: Stable operation in ultra-high-availability, high-security data centers run by T-Systems – with proactive monitoring and proven compliance mechanisms.

Data protection: Data is stored, processed, managed and provisioned according to German / European legislation and German / European security standards.

Availability: Availability guaranteed by SLAs.

Integration: Legacy databases and applications can be integrated into the collaboration landscape via dedicated interfaces.

Project efficiency: Complete your projects faster and with better outcomes thanks to better international teamwork and enhanced knowledge management.

Functionality may vary in accordance with the specific DSC solution chosen.

DYNAMIC SERVICES FOR COLLABORATION

WHICH OF THE TWO SOLUTIONS IS BEST FOR YOU?

Two DSC solutions are available, each tailored to a particular organizational size (user numbers). Availability is the same for both, at 99.9 percent, and guaranteed by a corresponding service level agreement (SLA). Dedicated application instances (single-tenant approach) are created for each customer. State-of-the-art security mechanisms and IT processes at T-Systems' data centers ensure cast-iron protection of your data, and outstanding operational reliability.

	STANDARD – FOR 1,000 TO 10,000 USERS	PROFESSIONAL – 5,000 USERS AND ABOVE
