FULLY INTEGRATED HEALTHCARE IT FOR HOSPITAL SYSTEMS (2014, SINGAPORE)

CUSTOMER PROFILE

- Integrated Health Information Systems (IHIS) drives large programs for IT development and maintenance in Healthcare for Singapore - funded by the Ministry of Health Singapore (MOHH).
- One such case was the Community Hospital Common System (CHCS) programme of work. This required development & deployment of a common platform for hospital management, pharmacy management and clinical management modules for community hospitals in Singapore.

OUR SOLUTION

- We implement and run the SAP systems ECC (ERP Central Component), IS-H (health specific solution for patient management and billing), BO (Business Objects) and BI (Business Intelligence for Reporting) at the IHIS DC.
- We implemented interfaces for vertical integration, including billing of drugs, clinical service charging and stock information.
- We built interfaces between Community Hospital and other relevant systems of healthcare stakeholders in the SG system, such as the NEHR (National Electronic Health Records), NHIS (National Health Identification Service), SPP, CHAS (Community Health Assist Scheme) and Mediclaim.

Efficiency, Simplicity & Transparency
