

# MIX AND MATCH! DYNAMIC SERVICES FOR INFRASTRUCTURE

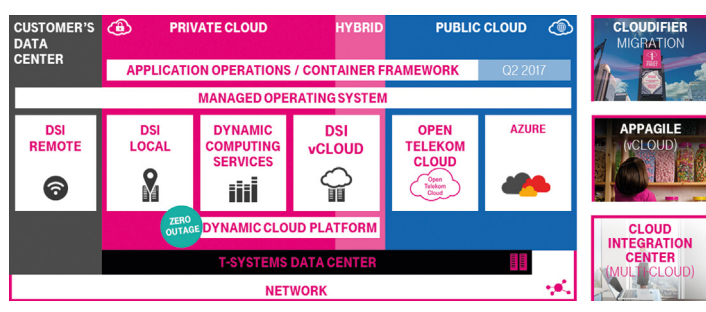

## THE CHOICE IS YOURS

Digitization is driving entirely new business models, smart manufacturing methods, and ever-greater integration. These trends, in turn, generate demand for compute resources, storage, and intelligent infrastructure strategies. Cloud services clearly have a major role to play in addressing these challenges. However, one-size-fits-all is not going to work. So you need to answer a number of key questions: What operational and management tasks can you outsource efficiently? How critical are business continuity and scalability to each of your use cases? Do you need to take account of any local requirements? Dynamic Services for Infrastructure is a T-Systems offering that allows you to create a tailor-made solution to all of these issues and more. Available worldwide, it includes resources from private and public clouds, plus managed and on-premises services. It goes far beyond the provision of infrastructure alone. We meet your unique requirements by combining a wide range of resources and services from a multi-cloud ecosystem.

- In line with your digitization strategy
- With services from the cloud and for your on-premises IT landscapes
- Everything from infrastructure to application operations
- With add-on services, e.g. management of hybrid landscapes

Take advantage of the breadth, security and reliability of our one-stop, multi-cloud offering.

## THE BEST POSSIBLE BLEND – DSI SOLUTIONS AND SERVICES

## YOUR KEY BENEFITS WITH T-SYSTEMS

**Low-risk digitization:** continuity and stability for your traditional IT operations in conjunction with the efficient, flexible introduction of innovative solutions – thanks to fast project execution and our experience with major international transformation projects.

**End-to-end transformation with the Cloudifier:** a standardized, fixed-price service for rapid, reliable, and structured migration to the cloud. The service includes analysis of potential improvements, consulting, digitization, migration to the cloud, and ongoing operations.

**Managed services worldwide:** managed services comprising infrastructure and application operations are available worldwide, and ensure consistently high quality standards. Scalable computing services are delivered from a dynamic cloud platform in twin-core data centers in Munich, Frankfurt, Magdeburg, the USA, and Singapore.

**Maximum quality with Zero Outage:** this quality-assurance initiative safeguards stable, reliable IT operations, eradicates risks, and ensures IT acts as a catalyst for greater business efficiency.

## HOW WOULD YOU LIKE TO GET STARTED?

- Cloud readiness check
- Jump-start workshop and/or proof of concept for a selected topic
- DSI vCloud Basic entry-level offering at a discounted price
- Jump-start the Cloudifier on the Open Telekom Cloud
