

# FREE UP YOUR MIND. YOUR BUDGET. YOUR FUTURE.

Reliable, secure, demand-driven operation of your business-critical legacy IT

## LEGACY IT REMAINS VITAL

Even in the age of digital transformation and cloud services, legacy IT remains vital – especially for business-critical applications with high compliance standards. In this space, reliability is all-important, even if changes are needed, and needed urgently. For example, because business growth is outstripping available data center space, because your hardware is nearing the end of its lifecycle, and because it is increasingly hard to maintain in-house skills for both old and new technologies. And the situation is exacerbated by a budget that it is not expanding at the same rate as the demands you must address. Against this background, you have to ask yourself: Is it really necessary, really advisable, to continue to operate your legacy IT in-house? T-Systems can help you find the right answer, and make the right move. **Because T-Systems is an experienced partner who can ensure the secure, reliable operation of your dedicated legacy IT system in one or multiple certified data centers. You have a choice of predefined bundles, comprising servers, storage and back-ups services. These bundles can be combined, or extended to include add-on services – at any time. Plus, top-to-bottom standardization means your Classic Hosting solution can be implemented quickly and simply.**

## CLASSIC HOSTING FROM T-SYSTEMS

Provisioning and operation on one or multiple DIN/ISO 27001-certified T-Systems data centers

- Servers
  - x86 (Linux/Microsoft Windows)
  - Unix (IBM AIX)
- Storage
  - Back-up services

READY-TO-GO BUNDLES COMPRISING HARDWARE, STORAGE AND LICENSES

### Add-on services

- Additional storage capacity
- Additional storage types, classes, technologies
- Service provisioning in the country of your choice
- Connection to a Deutsche Telekom data center

## THE BENEFITS FOR YOU

### Free up your mind

We will deal with the nuts and bolts of operating your infrastructure, liberating you from the time-consuming hassles. You can be sure of compliance with privacy and security standards. And your IT resources will scale in line with your changing business needs. Plus, you can take advantage of our proven expertise and experience.

### Free up your budget

Outsourcing to T-Systems means you no longer have to invest in your own infrastructure. What’s more, because we can consolidate assets and secure economies of scale in procurement and operations, you can look forward to significant savings. You simply request and use the services you need, when you need them.

### Free up your future

T-Systems delivers made-in-Germany reliability and quality, backed by state-of-the-art hardware, giving you the freedom to focus on a better future. And with T-Systems, you can transform your legacy IT to a hybrid cloud environment – when and where it makes good sense for you and your business.

### Your three-step path to a hybrid cloud environment

- Cloud Readiness Check
- Hybrid IT Infrastructure Workshop
- Proof of Concept (PoC)
