YOUR CONVEYOR BELT TO THE CLOUD

Application Transformation & Modernization Factory **(ATMF)**

EMBRACING THE CLOUD – WITHOUT THE RISK

Digitization and the rise of cloud technologies are putting businesses under pressure to take action. But for many, the risk seems too high. There is an answer to this dilemma: partnering with an external expert. This allows you to place responsibility for one-time application migration in experienced hands, and enables you to free up in-house resources for other tasks. This is where the T-Systems Application Transformation & Modernization Factory (ATMF) comes into its own. It offers standardized, end-to-end migration to the cloud – available as fixed-price service packages in standard sizes. The ATMF offering, in conjunction with the T-Systems Cloudifier, is ideal for non-SAP and non-Microsoft applications, including home-grown solutions – in other words, for all the applications that add the most value to your business. There are two migration scenarios. The first is the shift to the cloud, where existing applications are not significantly changed, but readied for a virtual environment. Second, there is the modernization of applications – i.e. reengineering them to be cloud-native. Both approaches are based on standardized, clearly defined phases.

Design phase
- Potential analysis: evaluation of strategy, benchmarking, identification of potential savings and business opportunities
- Target architecture: expert advice on the most suitable applications, what steps to take, and the best target platform

Transform phase
- Industrialized migration via a factory-based approach, using information obtained during the design phase
- Automated factory process that readies applications for the target cloud platform using proven methods

CLOUDIFY YOUR IT WITH STANDARDIZED SERVICES

YOUR BENEFITS WITH ATMF

Available as needed – Simply request and receive the transformation expertise, processes, tools and methods you'll only need once

Low-risk transformation – Migrate during ongoing operations, with a partner who has up-to-the-minute skills and a large team of specialists

Guaranteed quality – Industrialized solutions offer built-in quality assurance, via a factory-based approach with proven methods

In line with your requirements – Choose a cloud architecture (from private to hybrid or public) that meets the specific requirements of your business and applications; no vendor lock-in

On time and on budget – Rapid migration to the cloud according to a defined timeline – with no risk, no unpleasant surprises, industrialized services and at offshore prices

Unchain your IT – Protect investment and migrate specialized value-added applications

Remain up to date – test and migration scripts available for customer's own use; roll out new functions without waiting for major releases

FIRST STEP: THE SCOPING WORKSHOP

Workshop held to select five applications for proof of concept study:
- Cloud readiness assessment
- Migration and transformation
