

OneSource

Collect, prepare, and manage product information in one place; make it readily available for the users.

OneSource is a central platform for companies to share their product information consistently and securely. It supports both internal and external sharing through a modern web interface.

Challenges

- Product information is inconsistently distributed across different systems
- Significant manual effort is required to merge data from multiple heterogeneous and disjointed sources
- Considerable effort is needed to adapt existing systems to new requirements

Solutions

- All product data is managed comprehensively within a tailored, ready-to-use solution
- Support is provided for the entire content creation process from start to finish
- Global accessibility, high availability, and robust data security are delivered through a software-as-a-service (SaaS) solution
- Product information is available in multiple languages

Benefits

- **Consistent data:** All data is up-to-date and available at one place
- **Error reduction:** All product information is managed and stored in one system
- **Automated data import and export:** Standard and individual interfaces, import/export formats are available
- **Multi-device capable:** Product information can be accessed from various devices such as iPad, smartphone, or web services
- **Customer-specific:** Interface and navigation can be customized. Product information can be easily expanded
- **Everything from a single source:** Application, infrastructure, and consulting are all covered
