TELE ASSESSMENTS

EFFICIENT CLINICAL COLLABORATION FOR FASTER, BETTER-INFORMED DECISIONS

Tele Assessments facilitate digital and secure physician-to-physician consultations, allowing them to collaborate seamlessly across departments and institutions without being physically present in the same location. By supporting both real-time (synchronous) and asynchronous workflows, T-Systems' Tele Assessments enable faster case reviews, well-grounded decisions, and structured, traceable documentation, helping healthcare teams deliver efficient, coordinated, and patient-centered care.

TELE LIVE ASSESSMENT: REAL-TIME CLINICAL COLLABORATION FOR FASTER DIAGNOSES

Tele Live Assessment enables secure, synchronous **physician-to-physician communication** based on comprehensive digital patient data. Our solution enables the **structured real-time collaboration on patient data** and consolidates all medical information in a single environment.

BUSINESS CHALLENGES

- Limited access to specialist consultations in real time, especially across institutions and locations
- Frequent patient transfers to obtain expert input, increasing associated costs and risks
- Interdisciplinary case conferences requiring specialists to be physically present for evaluation
- Delays in clinical decision-making due to fragmented communication channels
- Lack of integrated access to complete patient data during consultations

WHAT WE OFFER

01

Secure, **real-time, physician-to-physician communication** via audio, video, and chat

02

A web-based platform for **joint review of patient data and case discussions**

03

Integration of clinical data and communication within a **single digital environment**

04

Audit-proof documentation for consultations and decisions to ensure traceability

BUSINESS BENEFITS

- Faster diagnostics and shorter decision cycles
- Reduced patient transfers and improved resource utilization
- Improved treatment efficiency and potentially shorter hospital stays
- Higher quality of care through timely access to expert input

OUR USP

- Fully integrated **audio, video, and chat within clinical workflows** without media disruptions
- Real-time collaboration supported by **direct access to relevant patient data**
- Secure, web-based platform requiring **no additional infrastructure**
- Structured and audit-ready documentation of consultations and outcomes

TELE REMOTE ASSESSMENT: ASYNCHRONOUS COLLABORATION FOR DISTRIBUTED EXPERTISE

Tele Remote Assessment enables physicians to collaborate across departments and institutions through structured, asynchronous workflows. Instead of requiring specialists to be available at the same time, cases can be reviewed, processed, and documented at different stages, allowing experts to contribute flexibly while maintaining a complete and traceable case history.

BUSINESS CHALLENGES

- Coordinating complex, cross-institutional telemedicine processes (e.g., consultations, medical boards) is often slow and time-consuming
- Medical information is distributed across multiple systems, making structured case evaluation and decision traceability difficult
- Dependency on phone, email, or paper-based coordination leads to delays and inefficiencies, and increases documentation time and effort

WHAT WE OFFER

01

Infrastructure for telemedical collaboration across institutions using asynchronous workflows

02

Support for use cases such as consultations, medical boards, teleradiology, and telepathology reporting through structured digital forms

03

Secure exchange of medical information between specialists, departments, and locations through workflow-based processes, ensuring each participant receives relevant information at the right time

BUSINESS BENEFITS

- Faster and more transparent decision-making through structured forms, standardized reporting documentation, and complete case history
- Improved utilization of available expertise as specialists can participate across locations and on flexible schedules, without requiring simultaneous availability
- Improved compliance and quality assurance through traceable, audit-proof processes across all participating institutions

OUR USP

- **Consistent, workflow-driven approach** – with clearly defined steps from request submission to final reporting
- Clear task management and automated notifications for all participants
- Standardized documentation ensuring **traceability of clinical decisions**
- Seamless coordination across departments and institutions without ad-hoc communication

Bring the right expertise together - exactly when and where it's needed - for better patient outcomes
