PATIENT MANAGEMENT & BILLING SOLUTIONS

**WORKFLOWS HOSPITALS
CAN RELY ON**

Hospital billing is becoming more complex with rising documentation demands, changing reimbursement rules, and increasing pressure to reduce administrative workload. At the same time, even small billing errors can delay payments and impact financial stability.

T-Systems supports hospitals with an end-to-end patient management and billing portfolio designed for accuracy, compliance, and operational efficiency.

iMedA: INTEGRATED PATIENT MANAGEMENT & BILLING - BUILT EXCLUSIVELY FOR iMedOne®

iMedA is a patient management and billing solution designed specifically for hospitals operating the iMedOne® Hospital Information System (HIS). It is tightly embedded into iMedOne workflows, ensuring smooth administrative processes and consistent data usage.

OUR USP

- **One-system simplicity:**
Billing and patient admin run inside the same HIS, eliminating data silos and interface overhead
- **Highly accurate revenue capture:**
Rule-based coding (including OPS and ICD), automated invoicing, and integrated co-payment handling increase billing precision
- **Streamlined workflows:**
Test/batch billing and cancellation features reduce manual workload and accelerate processing
- **Comprehensive billing types:**
Supports statutory, private, accident, association billing, and advanced billing standards

BENEFITS AT A GLANCE

01

Patient administration and billing integrated directly into iMedOne®

02

Reduced manual effort through structured, workflow-based processes

03

Improved billing accuracy through integrated documentation and data consistency

04

Supports efficient processing and streamlined hospital administrative operations

IDEAL FOR

- Hospitals already using iMedOne® HIS
- Organizations looking for deep integration with existing iMedOne processes
- Teams aiming to standardize billing and administrative workflows

T-SYSTEMS SOLUTION FOR HEALTHCARE

When SAP announced the end of IS-H updates by 2027/2030, many hospitals faced an urgent challenge – how to ensure uninterrupted patient administration and billing for millions of patients. To resolve this, T-Systems and ATSP stepped in with a next-generation solution for hospital administration and billing, designed to replace legacy systems like SAP IS-H and support future operational needs. It's optimized for a smooth migration while preserving familiar workflows, minimizing staff retraining requirements, maintaining continuity in billing operations.

OUR USP

- **Next-generation successor to legacy platforms:**
Expertly engineered for organizations transitioning from SAP IS-H and similar systems
- **Continuity with innovation:**
Retains familiar processes, usability, and stable data models while streamlining and optimizing feature sets
- **Low-impact transition:**
Modular migration toolkit, readiness checks, data conversion plans, and automated support minimize operational disruption
- **Scalable & adaptable:**
Built on modern ERP technology (SAP S/4HANA) to support evolving hospital needs and future expansions

BENEFITS AT A GLANCE

- Designed for scalable patient administration and billing modernization
- Supports transformation away from legacy hospital administrative platforms
- Enables long-term flexibility through a stable and future-ready foundation
- Suitable for international deployment scenarios and evolving hospital requirements

IDEAL FOR

- Hospitals looking to transition from legacy systems like SAP IS-H to modernize administrative and billing landscapes
- Healthcare providers planning long-term digital transformation
- Organizations requiring an internationally available solution
