## TRANSFORM PATIENT CARE WITH iMedOne® & iMedOne® MOBILE

ONE HOSPITAL INFORMATION  
SYSTEM FOR EVERYDAY  
CLINICAL NEEDS

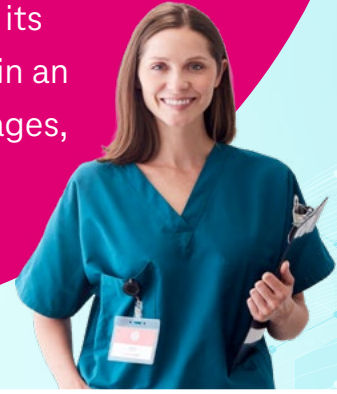

The digital heart of modern healthcare -  
**better care, faster decisions, and more time for patients**

iMedOne® is a comprehensive Hospital Information System (HIS) that transforms how hospitals operate by bridging clinical, administrative, and mobile workflows into one intelligent, secure, and flexible platform. Built to support patient-centric care, it enhances clinical efficiency, improves data transparency, and empowers medical teams with instant access to critical information when and where it matters most.

# WHY iMedOne® MATTERS FOR HOSPITALS

Healthcare delivery is only as strong as its foundation in digital systems, especially in an era of rising patient volumes, staff shortages, and growing complexity in care.

iMedOne® HIS delivers:

## Centralized digital backbone

A single, integrated platform for clinical documentation, administrative processes, discharge management, billing, and patient information, eliminating silos and manual workarounds.

## Mobile-first clinical access

With iMedOne® Mobile for iPhone and iPad, clinicians and nurses can access patient data such as imaging, lab results, treatment history, and vital signs on the go as well as directly at the bedside. This mobility increases flexibility, accelerates clinical decisions, and reduces time spent away from patients.

## Seamless process integration

All core clinical functions: Patient management, diagnostics, medication orders, care planning, and discharge - are unified within a single digital ecosystem, improving coordination and reducing errors.

## Integrated workflow across departments

From emergency and outpatient departments to radiology, pharmacy, laboratory, and nursing, iMedOne® connects subsystems seamlessly to ensure continuity of care and eliminate documentation gaps.

## Tailored to your hospital needs

With a modular architecture and customizable setup, iMedOne® can be adapted to the workflows and specialized requirements of any facility - ranging from general hospitals to tertiary care centers and university clinics.

## Secure and standardized data

Built on open communication standards with robust data protection, iMedOne® ensures secure information exchange across departments and facilities, while maintaining compliance with regulatory requirements.

# BENEFITS FOR STAKEHOLDERS

## For clinical staff

- Instant access to up-to-date patient information at the point of care
- Reduced administrative burden means more time for meaningful patient engagement
- Enhanced medication safety via integrated medication management and clinical checks

## For hospital administrators

- Real-time transparency across departments supports smarter resource planning and cost management
- Structured data enhances quality assurance, reporting, and research

## For patients

- Faster diagnoses, shorter waiting times, and clearer communication
- Continuity of care supported by a unified patient record across the hospital journey

## Transform your hospital operations with our future-ready HIS solution

With iMedOne® and iMedOne® Mobile, hospitals can accelerate digital transformation, optimize clinical workflows, and deliver better patient outcomes - all while safeguarding data and improving operational performance. It's not just a system; it's a strategic foundation for healthcare excellence in the digital age.
