

Is your collaboration system Fit For Purpose?

Our content experts can help you audit and review your live collaboration system and plan for upgrade and renovation

Providing a thorough and in-depth review of your existing collaboration system and the data contained inside it.

Organizations leverage on-line collaboration systems such as Jive, IBM Connections, SharePoint and Confluence as a means of supporting distributed workforces and diverse teams. When attempting to modernize these systems, a blocker to change can be the volume of data that has accumulated over the years and the validity of the data; these systems do not always have perfected archiving mechanisms and the volumes of data can be immense.

Moving collaboration data between heterogeneous systems, or from on-premise systems to the cloud is a big decision for most enterprises. Many companies see challenges in understanding the quality and quantity of the data. The dynamic nature of collaboration means that projects can be created and disbanded, leaving behind a plethora of information that may be required but un-owned. Similarly, business functions such as finance and HR can generate large amounts of information that can change across the years.

At T-Systems, we have a unique and globally respected team of professionals who perform large scale content migrations for the worlds largest corporations and organizations.

The first component of any engagement is the situation assessment. Using our unique tools and skills, the situation assessment reviews the physical quantities of data that exist inside of your collaboration system. When this is complete, one of our subject matter experts then reviews the data and writes an in-depth report highlighting the observations made. This report leverages the shared experience of thousands of engagements across hundreds of global companies.

- **What is stored versus what is still in use:** With quantities of data in the terabytes, collaboration systems are resource intense. The temptation to keep everything is strong; the volumes of data easily accumulate, and the review processes (in most cases) just are not there to impose structured lifecycle management
- **How many different systems are in use:** For most organizations, there are multiple systems from different platforms in different levels of adoption with a non-existent approach to standards, metadata and classification.
- **Global versus regional:** Islands of collaboration within global organizations present a barrier to the truly collaborative business.

Is your collaboration system Fit for Purpose to match the new way of working?

All organizations have had to rapidly adopt technology enabled collaboration as a survival imperative. The most successful embrace the opportunity to implement best practice working methods. They don't let the data stand in their way. Modernizing your collaboration systems does not mean starting again. Don't throw everything out, don't start from scratch, don't delete corporate memory in the interests of a new start. We can create a model for you that allows you to decide what to keep, what to curate and promote, what to use as the foundations for your archives and your history. And after the situation assessment, we can help you to find and keep the data; build the new information architectures, complete missing metadata and preserve security and author-based attributes.

"Many ideas grow better when transplanted into another mind than the one where they sprang up."

– Oliver Wendell Holmes

T-Systems experts will give you the full data to make an informed decision about how to modernize your collaboration system.

Your benefits of the T-Systems solution:

- Data inventory of all content types
- Expert observations of your existing landscape
- Works for
 - IBM and HCL Connections –On Premises and Multi-Tenant
 - Jive
 - Microsoft SharePoint OnPremises and Online
 - Microsoft Teams
 - Microsoft Yammer
 - Atlassian Confluence
 - Beezy
 - StaffBase

The T-Systems technology has connector capability to plug into any version of your source system, alleviating the requirement to upgrade multiple versions if you choose to upgrade.

This combination of unique technology and deep and varied experience of the use of collaboration technologies delivers a unique insight and a valuable starting point for any modernisation project.

Solution Packages – Fit for Collaboration
