Breakthrough for your IT

Our Future IT Transformation (FITT) enables a step-by-step and secure approach for a comprehensive modernization of your IT

Free your business-critical IT applications from constraints and make your legacy systems fit for the road to a modern age. With the Future IT Transformation Suite, we complement our many years of experience in IT transformation with a unique toolbox that enables us to gradually bring your legacy systems into an agile and secure cloud environment without interrupting ongoing business operations.

> **Digitalization is changing the world of business and our customers are forced to face up to this challenge to remain competitive.**

However, changing too quickly carries enormous risks, such as infrastructure instability, interruption of ongoing business operations and also unplanned cost increases. Mostly still accompanied by a project cycle that is far too long. It is not without reason that the modernization of the IT architecture and infrastructure is considered the most important factor for an agile, digital and, above all, future-proof business model. Only if you dare to take this step will you be able to open new business areas and tap the full potential of your company. However, the modernization of business-critical applications is often delayed because they keep the business running and the applications are closely linked to the respective business model. The primary goal when transforming legacy systems should therefore be to minimize your own business risk and avoid "big bang projects". To do this, you need a trustworthy and security-oriented partner.

T-Systems has decades of experience in large, complex infrastructure projects and has both the expertise and the toolset required for successful IT modernization. The Future IT Transformation Suite offers a proven portfolio of six proprietary IPs that can help you determine where your company is on its modernization journey.

Legacy systems often lead to high operating costs, prove inflexible when adapting and slow down your digitization roadmap. Optimize your architecture with customizable microservices and unlock valuable data that was previously trapped in your legacy architecture. FITT is characterized by a segmented, secure and comprehensive modernization approach and transforms your legacy systems into the modern age - "Fit-for-Future".

Our approach

T-Systems is an enabler of digital transformation and helps companies to become fit for the future. We divide a successful IT transformation into the following steps:

- Landscape assessment
- Transition from monolith to microservices
- Rehosting strategy
- Migration from mainframe to cloud
- Data consolidation and synchronization

Your advantages

- Unique toolbox for effective IT modernization at all architectural levels
- Transformation from monoliths to microservices through a segmented transition
- Mainframe containerization approach to modernization with standardized, automated digital tools
- Identification of quick wins for transformation and implementation of faster ROI
- No risky big bang project
