

Breakthrough for your IT

Follow a segmented, secure and innovative approach to IT Modernization with our Future IT Transformation Suite

Free your mission-critical IT and catapult your legacy systems for the modern age with our Future IT Transformation Suite

The combination of T-Systems' experience and our proven digital toolbox unlocks value from your legacy architecture with minimal business risk and disruption.

The world is changing at rapid pace and so too must your business. But rapid change brings huge risk; moving from legacy to modernization brings potential challenges of infrastructure instability, business disruption and cost explosion; not to mention a never-ending project cycle. While modernizing your IT architecture to prepare the infrastructure as the backbone for your company's agile, digital business world is a must; the risks often outweigh the benefits. Instead of moving with the times, you're surviving with them, never truly reaching your business' true potential.

Many enterprises are reluctant to modernize mission-critical applications because, well, they are mission critical! The business quite literally runs on them! So how do you mitigate the enormous business risk associated with modernizing legacy systems and how can you find a trusted, secure partner to manage the risk on your behalf?

T-Systems has decades of experience in large, complex infrastructure projects and has both the knowledge and the tool set required for successful IT Modernization. Our Future IT Transformation Suite (FITT) offers a unique portfolio of six proprietary IPs that can assess where your business is on its modernization journey, rewrite your architecture with micro services that can be deployed individually, and unleash the valuable hidden data trapped in your old architecture.

Through a segmented, secure and comprehensive modernization approach, you can catapult your legacy systems into the modern age with minimized risk, disruption and worry.

Our approach

Legacy systems often lead to a high cost of ownership and render inflexibility to the system. Accelerate your digitalization roadmap by transforming your IT landscape. As an enabler of digital change, T Systems can help you get future ready. The FITT Suite is designed to help you kick start your transformation journey without freezing code.

Aligned closely with our customer challenges, our focus areas for IT modernization include:

- Landscape assessment
- Monolith to microservice transition
- Rehosting strategy
- Mainframe to cloud migration
- Data consolidation and synchronization

How customers can benefit

- Unique suite of tools for effective IT Modernization, addressing all architecture layers
- A modern approach to legacy transformation, enabling monoliths to micro services transformation via a segmented transition
- Unlike traditional IT Modernization, we bring a mainframe containerization approach to modernization using standardized, automated digital tools
- Identify quick wins for transformation and realize a faster ROI
- We can segment traditional 'big bang' projects to mitigate risk, minimize system outages and keep projects on budget and on time
