

Internet Protect Pro

Enable security and high performance
for remote workforce

Powered by

With Internet Protect Pro, T-Systems offers an all-in-one solution delivering your security stack-as-a-service from the cloud. Eliminate the cost and complexity of traditional secure web gateway approaches. By moving security to a globally distributed cloud, Zscaler™, you benefit with a faster experience as the internet gateway is closer to the user. Together, T-Systems & Zscaler are enabling a secure path to digital transformation for businesses.

With Internet Protect Pro, businesses can completely secure their employees no matter their location or device, enabling fast and direct-to-internet connections while protecting against breaches and data exfiltration.

As applications move to the cloud, the security perimeter is bypassed as the user traffic is often diverted straight to the cloud. Additionally, today's complex threats have triggered an explosion of new security appliances, all finding their way into your overworked gateway. Administrators are in a constant battle to keep up with required security updates for their appliances. The complexity of deploying and managing all these appliances — and their associated costs— are out of control. Furthermore, it's all associated with what is now outdated architecture.

Internet Protect Pro sits between your users and the internet, inspecting every byte of traffic inline across multiple security techniques, even within SSL. You get full protection from web and internet threats. And with a cloud platform that supports Cloud Firewall, Cloud IPS, Cloud Sandbox, Cloud DLP, CASB and Cloud Browser Isolation, you can start with the services you need today and activate others as your needs grow.

Some of the benefits of the Internet Protect Pro are:

- Top-notch security features
- Protection to all internet traffic
- Block threats and data leaks in real-time
- Stop botnet communications and data exfiltration

Visibility and policy control

- View internet usage by user, location, web application
- Identify shadow IT
- Control on employees' internet usage

High performance

- Offer a faster user experience that enhances employee productivity with seamless access to apps from anywhere

Simplicity and cost savings

- Eliminate the cost/complexity of managing appliances
- Consolidate multiple point products into one solution
- With global monitoring dashboard and unified log-in, troubleshoot faster even when the user is off the network

Scale quickly

- Deploy rapidly and scale on-demand, add capacities easily as required

Why T-Systems?

- Proven expertise/capabilities with many high-quality Zscaler roll-outs
- Managed service quality as per industry standards
- Management of services including operation of the administration portal
- Administration of policy rules and filter settings
- Adaptation of functionalities and services to current user behavior
- A large number of Zscaler certifications.

Abbreviation:

- SSL: Secure Socket Layer
- CASB: Cloud Access Security Broker
- IPS: Intrusion Prevention System
- DLP: Data Loss Prevention

Professional Edition – Internet Protect Pro

When to use?		Professional Edition for fundamental security protection
What is included?		<ul style="list-style-type: none"> ▪ Implementation workshops (planning, connection and authentication) ▪ Global Cloud Platform ▪ Real-Time Reporting and Logging ▪ SSL-Inspection ▪ Managed Services ▪ Standard Firewall ▪ Inline Antivirus and Antispyware ▪ Cloud Application Visibility
How much does it cost?		€ 4.20 per month per user

Business Edition – Internet Protect Pro

When to use?		Business Edition for advanced security protection
What is included?		<ul style="list-style-type: none"> ▪ Implementation workshops (planning, connection and authentication) ▪ Includes all Professional Features ▪ Standard Digital Experience ▪ Essentials out-of-band CASB ▪ Managed Services ▪ Advanced Threat Protection ▪ Bandwidth Control ▪ Cloud Application Control
How much does it cost?		€ 6.30 per month per user
