General Availability  
ImageMaster 9.12.2

## Discover new possibilities.

Flexible.  
Fast.  
Efficient.

### Perform different searches in parallel and display hit lists in different tabs or windows at once

-  Users compare search results and work with different hit lists in parallel due to the separation of hitlists in tabs or windows
-  Simplify work and boost efficiency

### Thumbnail preview in hit lists

-  Users identify the searched document in the hit list via the thumbnail of the document
-  Simplify identification of relevant documents and boost efficiency

### Prioritization of multiple attachments within a document

-  For documents with more than one attachment one file can be marked as preferred, which is presented automatically in document preview and as a thumbnail
-  More facile work and boost of efficiency

### OfficeClient – Modify attribute values of already managed documents

-  Users open a document and modify the attribute values directly in O365
-  More flexible handling of documents and boost of efficiency

### Bulk export of documents by users

-  A process guides users with specific rights from search via hit list to export of documents
-  Simplify bulk export within a transparent process

## Create new combinations.

Combine systems easily.

### Adding timestamp of creation date in zip file name of documents forwarded via E-Mail

-  In case of forwarding extensive bank statements via zip files in e-mails the attachments can now be distinguished.
-  Simplify identification and enable automated processing for asset managers and heavy traders

### Direct access to binary attachments via REST WebServices

-  Direct call of binary attachments via REST WebServices for integration scenarios e.g., for displaying in browser
-  Simplify integration across systems

### Full text search – re-submit index values from ImageMaster to SOLR

-  Revision of data loss or corrupt data with avoidance of a complete re-indexing
-  Short-term safeguarding of business continuity

### AdminClient – Extension of Signature Service configuration with hash-tree management

-  Configuration of hash tree functionality in the AdminClient
-  Simplify and centralize administration

### OfficeClient – Configurable location of IIS website of OfficeClient

-  Option to shift IIS website to a non-OS location
-  Enhanced system security

### Prefix for archive files stored in S3 /Object Storage archives

-  Management of data in cloud archives
-  More flexible management and enhancement of performance for large amount of data in cloud scenarios

## Enjoy new support.

Simple.  
Secure.  
Reliable.
