

AWS Security Assessment – the health check for your cloud environment

T-Systems accompanies customers in identifying potential insecurities in their AWS environments and helps them strengthen their setups during an AWS Security Assessment.

Security is the number one priority when it comes to cloud environments. Misconfigurations, quick fixes and patches can become dangerous over time and make your setup vulnerable. Identifying weak points and taking action is key to a healthy and well-running cloud system in the long run. The cloud landscape is constantly evolving, regulations change, and it becomes evermore difficult to keep pace along with daily operations.

An AWS Security Assessment is a consultancy offering which spans over several days and is designed to detect and assess potential security risks scoped to one environment, workload, or set of related workloads. A complete assessment will allow us to give specific recommendations depending on the application architecture and AWS services in use and offer you the chance to get a professional and independent view on the security of your setup by a certified AWS Security expert.

Phased AWS Security Assessment

The AWS Security Assessment is structured into three phases. It is designed to be applicable to customer's needs and to provide a 360-degree assessment of the setup.

The phases includes:

- Gathering and Planning
- Security Assessment Execution
- Executive Presentation with Detailed Report

What can you expect?

The AWS Security Assessment will cover the following focus areas based on the Cloud Adoption Framework:

- 1 General Security
- 2 Data Protection
- 3 Infrastructure Security
- 4 Identity & Access Management
- 5 Detective Controls
- 6 Incident Response

A detailed report will be generated as per the findings from the customer interview as well as the findings from the AWS landscape. The report along with the executive summary will be shared with the key stakeholders. It will contain the key findings with severity, prioritized recommendations, and the effort estimation for remediating the findings. This will allow our customers to take the right decision based on the results.

Why pick us for your AWS Security Assessment?

- As an AWS Premier Consulting and Security Competency Partner, we are a validated provider for AWS Security Assessments by AWS Professional Services
- T-Systems has more than 750 certified AWS professionals and holds extensive experience in security
- T-Systems has been approved to deliver ProServe Security offerings. This exceptional recognition places T-Systems as one of the very few AWS partners eligible to advise and sell products with a high security scope
