SIMPLY SHIFTING SRM

Transform your SAP® SRM landscape to the digital future of SAP S/4HANA® and SAP® Ariba®

SAP SRM allows procurement departments in modern enterprises to shift indirect procurement processes to the users themselves. This allows procurement staff to devote their time and resources to processes that generate the most value for the business. Maintenance contracts for SAP SRM will, however, expire by 2025 at the latest in the course of the transition to SAP S/4HANA. Companies who want to gain a competitive advantage by using the latest services and features have a good reason to migrate now. But many organizations are also using non-SAP products, too, increasing the number of processes and interfaces involved.

Companies need a roadmap to help them navigate this complexity. One that guides them as they analyze existing business processes and maps those processes to the new SAP target system. Because transitioning from SAP SRM to SAP S/4HANA and SAP Ariba presents a number of challenges.

- Which processes does SAP S/4 Procurement cover?
- Which processes do I need SAP Ariba components for?
- How do SAP S/4HANA and SAP Ariba work in concert?
- How should I organize the transition?
T-Systems has partnered with apsolut Group to create specially developed SRM consulting packages. We call them Simply Shifting SRM. These bundled services give enterprises an ideal roadmap for transitioning from SAP SRM based on the complexity of their specific SAP SRM infrastructures. In addition to a customized assessment that covers infrastructure, individual applications, and business processes, the packages also include several workshops.

With Simply Shifting SRM, enterprises implement their transitions much faster and more cost-efficiently.

### Simply Shifting SRM Packages

<table>
