Empowering the health sector with more sovereignty

CHALLENGE

Health is becoming increasingly essential in our fast-paced world. Our customers in the health sector aim to connect patients, health solution providers and innovation faster but face the challenge of meeting specific compliance and security requirements for the healthcare industry in Germany. Within highly regulated healthcare environment, it is necessary to comply with European and national regulations and to protect personal data efficiently.

BENEFITS

Regulatory requirements of the German authorities regarding personal data and privacy can now be met. Enabling the T-Systems Sovereign Cloud, our customers can now deliver real added value in respect to health data sovereignty and concentrate on the business concept, leveraging further qualitative business opportunity while ensuring ongoing compliance.

Innovative AI translation with T-Systems Sovereign Cloud

CHALLENGE

Whether for internal communication, or for external blog posts and news that a company publishes, the entire data pool of inputs for any communication within a company has a major impact on the quality of machine translation and other language technology. Therefore, all company's data are considered sensitive and unique. Protecting them is one of the corporate values that Lengoo is committed to.

BENEFITS

- Sovereign solution meets the customer's demands for confidentiality
- No internal on-premise systems are needed
- Scaling to handle continually increasing amounts of data
- Customers benefit from cost savings, high quality, and "to the point" translations
