

Transforming Healthcare with Digital Excellence

Empowering Healthcare Providers with Cutting-Edge Digital Transformations

The COVID-19 pandemic has triggered a monumental shift in the healthcare sector. Nowadays, healthcare facilities necessitate adaptation to new trends and different strategies to mitigate the significant cost burdens of this adaptation.

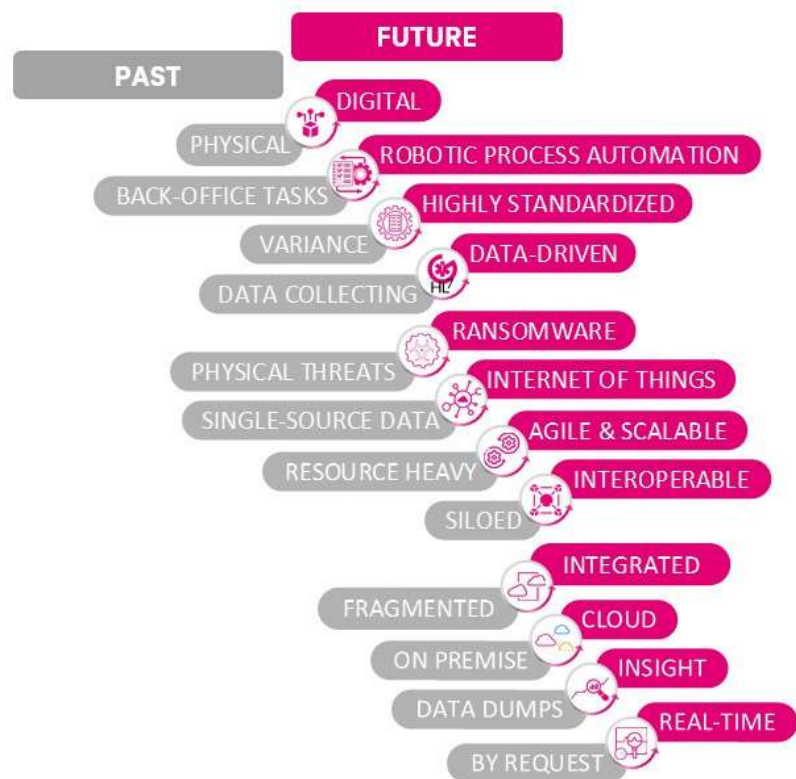

At TSNA we understand the evolving landscape of healthcare and the needs of every hospital in 2023:

- Meet the requirements and demands of ever-growing IT ecosystems and related applications
- Public Cloud Integration
- Patient records retention and exchange
- Tailored strategies to lead trends: from CapEx to OpEx models
- Robotic Process Automation (RPA)
- Prevention and recovery from service outages

Due to key advances in healthcare technology, we have the power to shape the future of healthcare in 2023 and beyond. With our expertise in digital transformations and our deep knowledge of EPIC, we are revolutionizing the industry, providing tailored solutions to navigate these changes, optimize operations, and enhance patient care with our Clinical Assessment.

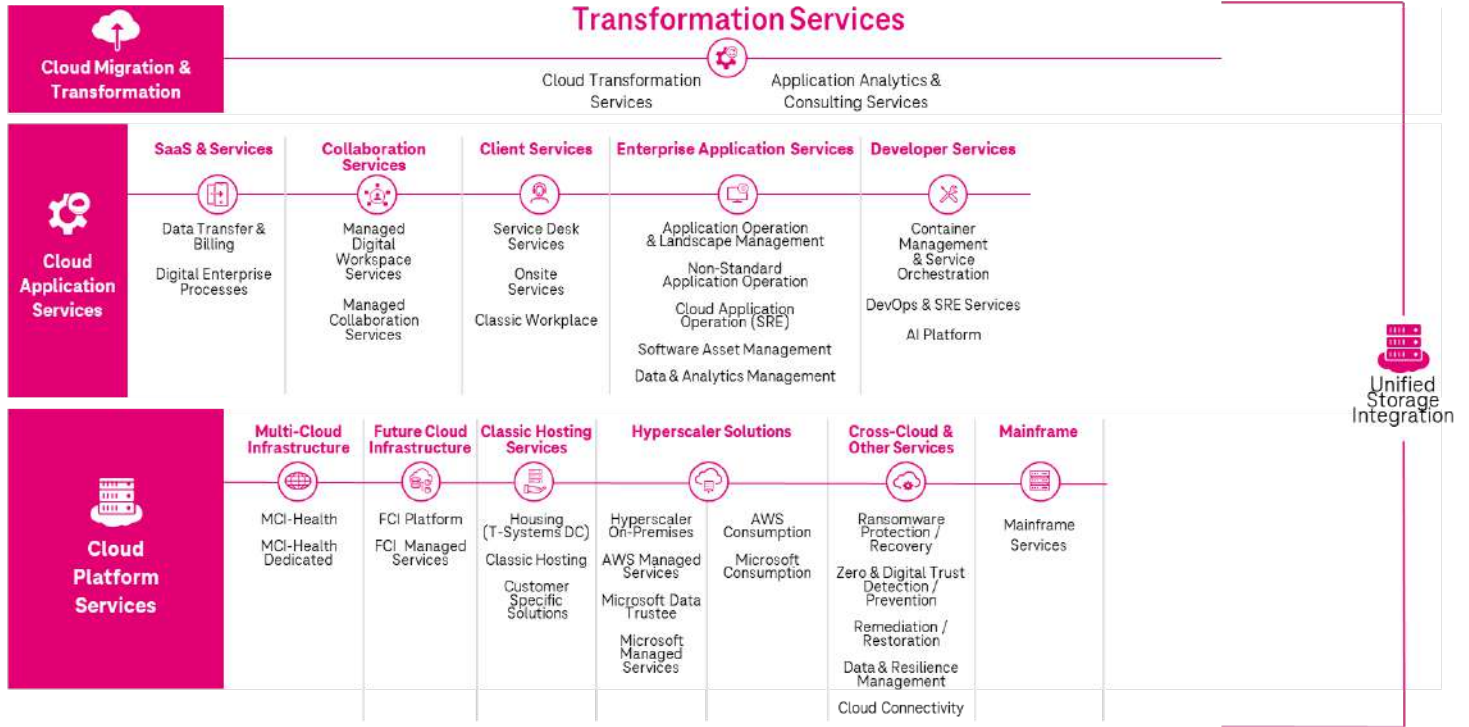

T-Systems Clinical Assessment

Our clinical assessment services go beyond traditional approaches. We believe in incorporating technology as an integral part of your clinical workflows, rather than just an add-on. By seamlessly integrating innovative solutions into your existing IT infrastructure, we help you optimize patient care, enhance operational efficiency, and improve patient outcomes.

Healthcare Portfolio

Our health solutions portfolio is strategically designed to cater to the global health market, featuring seamlessly integrated technologies and services rather than just added on. By addressing supportability gaps in the current TSI infrastructure, we offer platforms that go beyond the EHR suite, supporting various clinical ancillary applications. Leveraging flexible compute capabilities and scalable, elastic storage options, we empower you to excel in the dynamic healthcare industry, adapting effortlessly to its ever-changing landscape. With our comprehensive approach, you can thrive and succeed in the face of evolving challenges.

IT Optimization with Assessment and Advisory Services

At T-Systems, we offer assessment and advisory services tailored to cloud and sales optimization.

Clinical Assessment

For customers that are seeking improvements within on-prem, or introducing private cloud and public cloud, having an unbiased view of your application and infrastructure landscapes is critical to expand, enhance, and improve IT services and unnecessary costs.

We are vendor / cloud agnostic and determine the best target platforms for each application whether it be on-premise, private, public or SaaS solutions, so that you get the most business value

We create transparency of your complete IT landscape whatever the applications, technologies or infrastructure so that you can make the right decisions more quickly

We identify security improvements using our Security Essentials approach defined by our recognized security experts in order to reduce your business risk

We execute highly automated assessments using our proven Enterprise Assessment which delivers actionable optimizations, recommendations & next steps allowing you to execute quickly and deliver more business value faster

We advise customers based on our practical knowledge of doing and living public & private Cloud for > 10 years – we are the experts!

T-Systems Multi-Cloud Infrastructure for Healthcare: Secure and Flexible

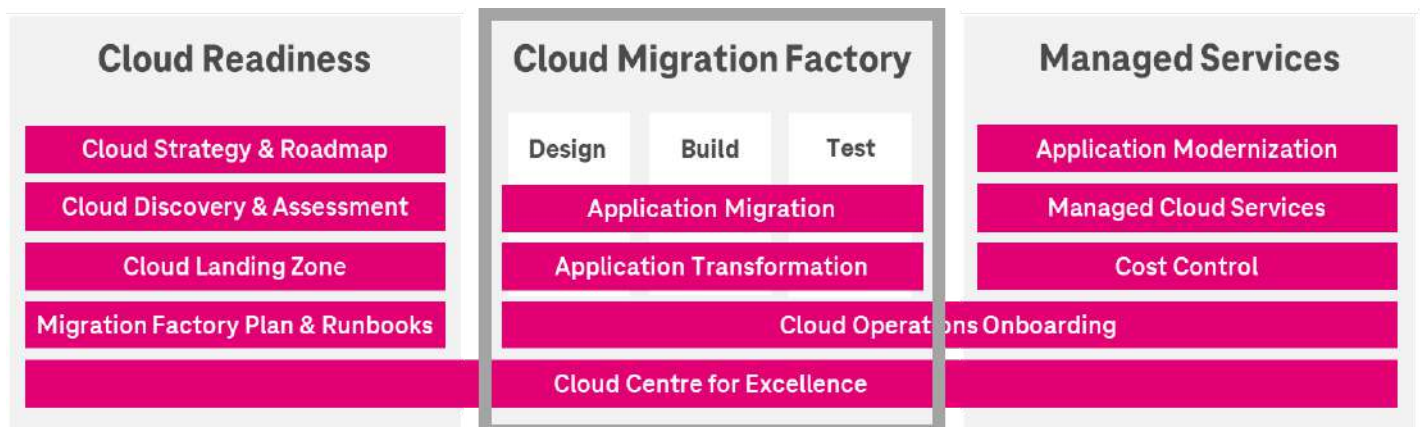

The T-Systems Multi-Cloud Infrastructure for health is a flexible and scalable solution that supports tomorrow's mission-critical applications, including GPU based systems for workloads including AI, ML, and virtual desktop infrastructure.

With compute and storage solutions designed specifically for virtualized, containerized, or physical EHR applications and crucial healthcare workloads.

As the significance of data privacy and security in healthcare continues to grow, our private cloud solutions offer a secure and reliable platform to protect critical applications and sensitive patient information. Whether you need to leverage our EPIC platform expertise or smoothly transition to a hybrid cloud environment, our solutions ensure enhanced accessibility, flexibility, and scalability. Experience the benefits of a robust infrastructure, simplified IT management, and improved collaboration. We take pride in our cloud agnostic approach, allowing us to work with various leading cloud platforms and tailor solutions to meet your unique needs while maintaining the flexibility to align with your organization's preferences. Rest assured, with us, you can fully harness the potential of cloud technology without being tied to a specific provider.

Unlocking Opportunities with the T-Systems Clinical Assessment

The T-Systems Clinical Assessment is the pivotal hybrid evaluation, that employs a modular, standardized, and highly automated approach to pinpoint the customer's business motivations and objectives. Additionally, it comprehensively analyzes the entire IT landscape, encompassing applications through infrastructure. Through this process, it identifies the optimal target hybrid cloud landscape, devises a migration roadmap, and provides costings and a business case, all while offering recommendations and optimizations for application and technology modernization. Across three dimensions, this assessment delivers invaluable, actionable recommendations and insights.

Extra Value

Our T-Systems dual-core data centers, together with our most valued partners, offer wonderful benefits:

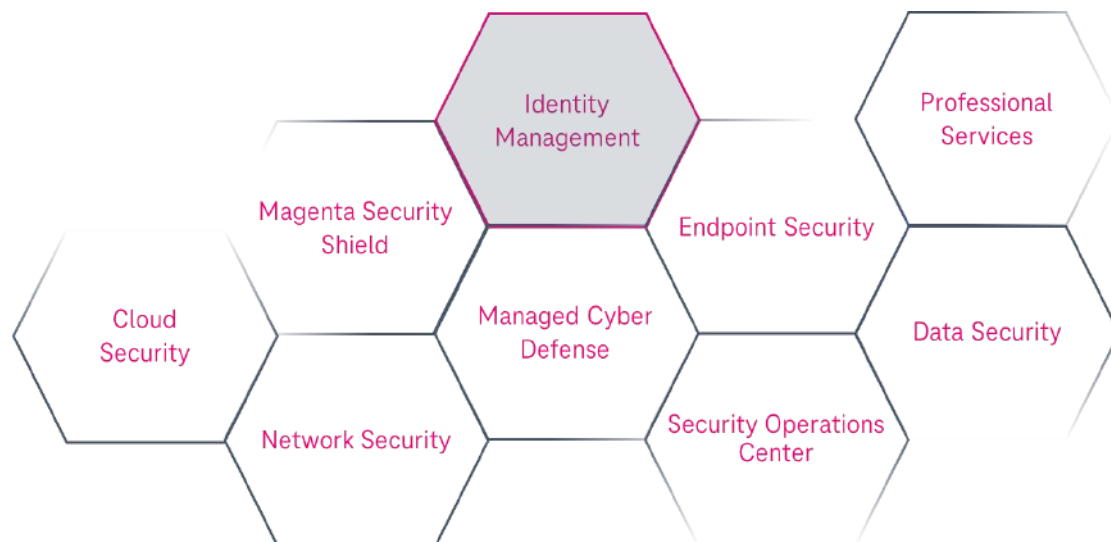

- The ability to deliver high-availability and disaster recovery solutions with synchronous data replication which allows organizations to maintain zero data loss during major incidents.
- A secure digital hub for our customer's multi-cloud strategies where we can connect all their public cloud, private cloud, hybrid cloud and legacy IT Infrastructure together to work within one large seamless IT landscape.
- And more... do not hesitate to ask for them to your consultant.

Security: Protecting Your Digital Assets

The healthcare sector is increasingly vulnerable to cyber threats; at T-Systems, we prioritize the protection of your digital assets and patient data. Our cybersecurity solutions are designed to safeguard your network, systems, and sensitive information from potential breaches, ransomware attacks, and other cyber risks. Leave the security of your network in the hands of our dedicated experts and focus on delivering exceptional care to your patients.

T-Systems, as a leading managed security service provider, specializes in offering comprehensive consulting and top-notch security solutions from Deutsche Telekom Security, covering a broad range of digitization needs. With our expertise, we ensure your organization's digital landscape is well-protected and prepared for the challenges of the modern world.

Our unique promise

- We provide a toolset and framework covering the entire cloud adoption journey.
- Hyperscaler independent, supporting all major platforms.
- Highly automated standardized approach across all hyperscalers, which is platform specific.
- Combining hyperscalers' Cloud Adoption Framework with T-Systems best practices.
- Supporting DevOps driven operations as well as migrations towards productized Managed Cloud Services.
- Contractually conducted under German / European law.

Join us on an exciting journey towards a safer, more adaptable, and collaborative healthcare future. Allow our cutting-edge digital solutions to expertly guide you in unlocking the true potential of your healthcare organization. Reach out to us today and take the first step towards transformation.
